THERMAFRAX

Thermage + Fraxel = Best Friends

Fraxel laser skin treatment resurfaces your outer skin layers – namely the dermis and epidermis – to smooth the skin surface as well as erase unwanted brown spots and wrinkles.

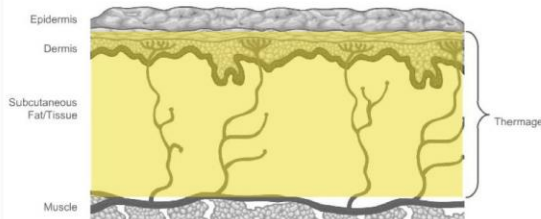

Individually, the procedures address the most significant signs of ageing: wrinkles and sagging skin, as well as skin texture and pigmentation.

Thermage and Fraxel in combination help tighten the skin in a non-invasive manner. Simultaneously, the procedures stimulate the production of fresh, smooth and healthy skin to replace damaged tissue for natural, younger looking results.

Thermage and Fraxel bring out the best in each other, just like you and your best friend. This non-surgical treatment sequence is your skin's best friend for total skin rejuvenation. The combined treatments help correct the most significant signs of ageing: sagging skin, wrinkles, skin texture and pigmentation.

Thermage Procedure

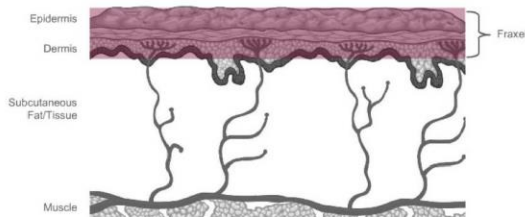

- Delivers radiofrequency energy deep into the dermis and subcutaneous layers of the skin

The new Thermage CPT system delivers radiofrequency energy to the deeper dermis and subcutaneous layers of your skin in a less painful and more effective manner, to stimulate new collagen growth as well as tighten and contour the skin.

Fraxel Treatments

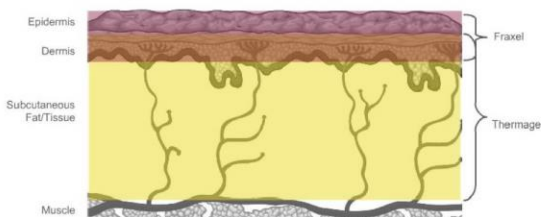

- Delivers laser energy to the dermal and epidermal layers of the skin (actual depth determined by pulse energy setting)

Fraxel laser skin treatment resurfaces your outer skin layers – namely the dermis and epidermis – to smooth the skin surface as well as erase unwanted brown spots and wrinkles.

Why Combine Thermage and Fraxel?

- Thermage + Fraxel can effectively treat all 3 layers of the skin for tightening and resurfacing results

In the correctly selected patient, this treatment effectively:

- Reduces lines and wrinkles
- Redefines contours and firmness
- Improves tone and texture
- Renews collagen
- Erases unwanted age spots and sun spots
- Improves the appearance of acne scars and surgical scars

Both procedures:

- Are effective on the face and body
- Require little to no downtime
- Are clinically proven for safety and effectiveness

The Ideal Candidate has mild to moderate skin laxity, some lines and wrinkles, as well as pigmentation. ThermoFrax is suitable for all skin types, and the average patient is 36 to 55 years old. With multiple Fraxel Treatments, excellent results can be achieved for patients with more severe lines and pigmentation.

Thermage and Fraxel are your skin's best friends!
"With the combined power of Thermage and Fraxel, one plus one does equal three."

The ThermoFrax combination is available only at Precision Aesthetics, where both the Thermage CPT and Fraxel treatments have been performed by the same specialist for the last 5 years.

THE EXPERT

Dr Vernon Ching, specialist plastic and cosmetic surgeon, and founder director of Precision Aesthetics based at Waterfall City Hospital in Midrand.
